

Bundled Payments for Care Improvement (BPCI) Advanced Annual Check-in Questionnaire

[illegible]

1

7

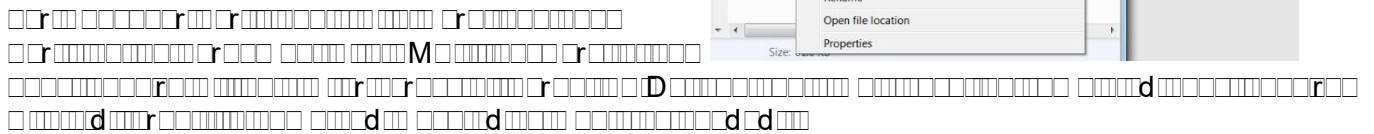

Purpose:

Participants' activities and barriers related to designing and implementing the BPCI Advanced Model

Instructions:

The first part of the study was designed to investigate the effects of the intervention on the participants' self-reported health status. The second part of the study was designed to investigate the effects of the intervention on the participants' physical activity levels. The third part of the study was designed to investigate the effects of the intervention on the participants' mental health status. The fourth part of the study was designed to investigate the effects of the intervention on the participants' social support levels. The fifth part of the study was designed to investigate the effects of the intervention on the participants' quality of life.

Partner Agreements

1. **Definition:** A **Decision Tree** is a model for classification and regression tasks. It consists of a root node, internal nodes, and leaf nodes. The root node branches into internal nodes, which further branch into leaf nodes. The leaf nodes represent the final classification or regression output.

Diagram illustrating the structure of a DNA sequence. The sequence is represented by a horizontal bar divided into segments. The segments are labeled with letters: 'D', 'r', 'd', and 'r'. The 'D' and 'd' segments are highlighted in red. The 'r' segments are white. The sequence is shown in a simplified, schematic manner.
